

# “Landscape Master” splash block Installation instructions.

Fits 2”x3” & 3”x4”, A or B Style, Downspouts or Elbows sizes.

“A” style Left picture (wide dimension 3” on top with 2” dimension on side)  
“B” style Right picture (narrow dimension 2” on top with 3” dimension on side)

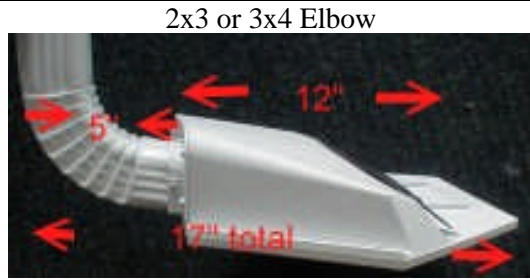

**NOTE; The Landscape Master must be secured to the downspout elbow and extensions or the waters’ force will push it away.**

2x3 Downspout installation	3x4 Downspout installation
<p>1. Install either the A or B plate on back of Landscape Master and secure with ZIP screws provided, 2 on each side. (do not pre-drill)</p>  <p style="text-align: center;">”B” style shown. NOTE: “A” or “B” style</p>	<p>1. Insert pipe into back of Landscape Master, (make sure bottom of pipe is inside of Landscape Master) and secure with two ZIP screws provided on the top, (do not pre-drill).</p>  <p style="text-align: center;">”A” style shown.</p>
<p>2. Insert pipe (make sure bottom of pipe is inside of Landscape Master) and secure with ZIP screws provided. 1 on top of plate and 1 on each side.</p> 	<p>2. If Landscape Master is installed with Flip-up hinge the bottom must be secured to the 3x4 pipe as shown with 2 ZIP screws provided.</p> 
<p>3. Secure to your existing elbow with ZIP screws provided. A downward slope of the pipe from the elbow to the Landscape Master is desired.</p>	<p>3. Secure to your existing elbow ZIP screws provided. A downward slope of the pipe from the elbow to the Landscape Master is desired.</p>

## More Options & Tips

**2x3 & 3x4 Elbow Installation**  
Repeat steps 1 & 2 of Downspout Installation.

Approximate distance water will be dispersed from building.

You can add 1 to 2" inches for 3x4 elbows.

**Flip up units**

With the extension Flip-up Hinge you can flip it up as one unit, never to trim around a splash block again, ever!  
We recommend that Flip-up units, do not exceed 3 ft from hinge.

**2x3 or 3x4 Pipe.**

The measurements above are approximate; your elbow length may vary.

To add more distance you add more pipe:  
Example; For over all distance of 3 ft. from the foundation, the 11" pipe would need to be 19" long.

Note; The mid section of pipe must be inserted into the back of the Landscape Master 1" and slipped over the elbow 1 1/2"

### 4. Down sizing pipe

If your downspout needs to be down sized so it fits properly into the back of the Landscape Master follow these instructions.

1. Using a needle nose pliers, go to the right half of the pipe corner and twist it right (inward) Picture 1, then on the same corner place the pliers on the left half of the same corner and twist left (outward) Picture 2. This will form a V in the pipe which makes the end smaller Picture 3.

Repeat this on all 4 corners of the pipe.
